

## **Adhesively bonded wood composite structures**

Douglas E. Howell  
Director, Polyurethane Product/Process Development  
Daubert Chemical Company  
Chicago, Illinois, USA

Adhesives are used to laminate wood products to a wide variety of other materials to accomplish specific engineering goals. The choice of adhesive is a critical one based on substrate, end-use requirements, application equipment and conditions, and environmental constraints. Characteristics of some of the best current adhesives in use for laminating are presented here.
